Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity.

Vockley J;

Ś

Claim 1; SEQ ID NO 1043; 114pp; English.

The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (GS) identified by both chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where differential expression of GS is indicative of GCA. Also included are

\$

```
modulating (M2) GA by contacting GC with an agent that alters the expression of at least one gene in Gs; (2) screening (M3) for an agent capable of modulating GCA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression of the gene is indicative of inflammation; (4) treating (M5) an inflammation (especially chronic) or in a tissue, an allergic response in a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation with an agent that modulates the expression of gene(s) from Gs in the tissue. M1 is useful for detecting GA, M2 is useful for modulating GA, M3 is useful for screening an agent capable of modulating GA preferably in an inflammation in a tissue; M4 is useful for detecting an inflammation of a subject to a pathogen or sterile inflammatory disease (e.g. psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis, cardiac reperfusion injury, enal reperfusion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease, uccerative colitis, periodontal disease; also bacterial finection, processed in granulocytes. Note: The sequence data for this parent did not form part of the printed specification, but was obtained in celetronic format directly from MIPO at the electronic format directly from MIPO at the electronic format directly from MIPO at the printed period or the printed specification, and subject to a pathogen or electronic dormat directly from MIPO at the printed period or the printed specification, and subject to a pathogen or electronic dormations. The present invention describes an isolated epitope (I) and an epitope cluster. Also described is a vaccine or immunotherapeutic composition (VVC) comprising (I). (I) has eyeostatic activity. VC is useful for treating an animal, by administering to an animal the vaccine or immunotherapeutic composition. VC is also useful for evaluating immunospenicity of a vaccine or immunotherapeutic composition, by administering VC to an HLA-transgenic animal and evaluating immunogenicity based on a characteristic of the animal, or by in vitro primary stimulation of a T cell and evaluating immunogenicity. (I) is useful for determining specific T cell frequency, by contacting I cells with a MHC-peptide complex, and further comprises ELISEVT analysis, I mitting dilution analysis, flow cytometry, in situ hybridisation and/or polymerase chain reaction (PCR). ABQ83843 to ABQ83858 and ABP74128 to ABP74131 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        478
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      538
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             598
     epitope cluster comprising the polypeptide. Also disclosed is a vaccine or immunocherapeutic composition containing an epitope of the invention. Compositions of the invention may be used in the treatment of cancer. The method can be combined with a radiation therapy, chemotherapy, prochemotherapy or surgery. The composition is also useful for evaluating immunogenicity of a vaccine or immunotherapeutic compound. Multimeric MHC -peptide complexes of the invention are useful for determining specific response, by performing the method prior to and subsequent to an immunisation step. Compositions of the invention are useful for diagnosing a disease. The current sequence represents an epitope of the invention with high affinity for MHC class I.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

                                                                                                                                                                                                                                       This is the nucleotide sequence of a newly isolated human SSX4 cDNA clone. The CDNA was isolated from a human testicular cDNA by PCR amplification using primers (see AAV7062-63) based on the known SSX2 sequence. A SSX5 clone (see AAV70661) was also obtained. 2 Porms of SSX4 were identified. One of these lacked nucleotides 311-466 but was otherwise identical to the present SSX4 sequence and is described as an alternatively spliced form. SSX4 shares 89.4% homology to SSX1 on the nucleotide level and 79.3% at the amino acid level. The inventional additionally provides expression vectors, transformed or transfected cells that can be used to produce SSX proteins, and primers (see AAV70062-73) useful for determining expression of an SSX gene in a sample. the translocation t(X;18)(p11.2;q11.2) found in human synovial sarcomas, involving joining of the SYT gene (AAT11778) on chromosome-18 at 18q11.2 to SSX2. The gene fusion is then transcribed to produce an SYT-SSX2 (AAT11781) fusion transcript and translated into a fusion protein. SSX2 may be distinguished from related sequence SSX1 (AAT11779) by digestion with Smar and Lapp. Primer AAT11784 has been used in polymerase chain reaction amplification of SSX2 sequences. Detection of the gene or its product in an abnormal location or as a fusion may be used in diagnosis of synovial sarcoma, using primers, probes, humanised antibodies, monoclonal antibodies, etc. Antisense oligonucleotides and antibodies may also be used therapeutically, and antitumour recombinant vaccines may be constructed e.g. in a vaccinia virus vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  540

The invention describes a method of treating genetically-defined disease associated with chromosomal aberrations yielding oncogenic fusion proteins (I). Treating cancerous cells containing (I) in a heterogeneous cell population, treating proliferative diseases associated with mutant cell population, treating proliferative diseases associated with mutant protein or cellular protein isoforms (II) dependent on heat shock protein common and protein isoforms (II) dependent on heat shock protein common protein treating cells expressing (II) involving administering HSP90-inhibitor. The method is useful for treating conceptual for treating or conceptual for treating but in the protein, treating cancerous cells containing fusion protein protein, treating cancerous cells containing fusion conceptual isoform dependent on heat shock protein (HSP9) 90 (e.g. for treating a disease e.g. hematopolet disorder such as T or B cell CC for treating a disease e.g. hematopolet disorder such as T or B cell (I ymphoma, chronic myeloid leukaemia (CML), ALL, ALL, ALL, ALL, ALL, and CMML, or a disease characterised by a solid tumour such as papillary thyroid carcinoma, Ewing's sarroma, and comma, This represents the DNA sequence of a chromosome aberration contained the contained of a chromosome aberration
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180

The method is useful for diagnosing, determining onset, progression, or regression of colon cancer in a subject, or for selecting a course of treatment of a subject having or suspected of having colon cancer. The colon cancer associated polypeptides are useful as markers for diagnosing colon cancer, and for following the course of treatment of colon cancer. The present sequence is human colon cancer-associated polypeptide gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cluster. Also described is a vaccine or immunotherapeutic composition (VC) comprising (I). (I) has cytostatic activity. VC is useful for treating an animal, by administering to an animal the vaccine or immunotherapeutic composition. VC is also useful for evaluating immunotherapeutic composition. VC is also useful for evaluating administering VC to an HiA-transgenic animal and evaluating immunogenicity based on a characteristic of the animal, or by in vitro primary stimulation of a Teal and evaluating immunogenicity. It is useful for determining specific T cell frequency, by contacting T cells with a MHC-peptide complex, and further comprises ELISPOT analysis, limiting dilution analysis, flow cytometry, in situ hybridisation and/or polymerase chain reaction (PC). Agg83843 to ABQ83858 and ABP74128 to ABD74713 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

The invention relates to an isolated epitope polypeptide that has high affinity for major histocompatibility complex (MHC) class I, and an epitope cluster comprising the polypeptide. Also disclosed is a vaccine or immunotherapeutic composition containing an epitope of the invention. Compositions of the invention may be used in the treatment of cancer. The method can be combined with a radiation therapy, chemotherapy, biochemotherapy or surgery. The composition is also useful for evaluating immunogenicity of a vaccine or immunotherapeutic compound. Multimeric MHC cell frequency. This method is useful for determining specific T cell frequency. This method is useful for evaluating immunological response, by performing the method prior to and subsequent to an immunosition step. Compositions of the invention are useful for diagnosing a disease. The current sequence represents an epitope of the invention with high affinity for MHC class I.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240

designated HOM-MEL 40. It was isolated using a novel method in which a designated HOM-MEL 40. It was isolated using a novel method in which a cells. Lysates of the host cells were screened with sera that had been treated to remove interfering binding partners. This involved contexting the sample with lysates of untransfected host cells involved contexting the sample with lysates of untransfected host cells and with host cells transformed with the same vector (phage lambda) used to make the CDNA library. The method, termed serological fishing, can be used to detect antigens in human tissues, esp. tumour cells, which are useful in the molecular diagnosis of diseases and/or for immunotherapy and gene therapy of infectious, autoimmune and malignant diseases (see also ANT4774-49). HOM-MEL 40 is expressed in 50% of melanomas, 20% of prostate cancers, 20% of gastric cancers, 20% of colorectal cancers, 12% of lung cancers and cells present a nonomer (see also ANW09449-52) derived from HOM-MEL, congesting that HOM-MEL 40 especific vaccines, useful in inducing
                                                                          Novel method of serological fishing - allows isolation of molecules (esp. antigens) associated with pathological conditions, e.g. Hodgkin's disease, cancer or auto:immune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cytotoxic T lymphocytes, are possible

Clone HOW-WEL-40 was isolated from a human malignant melanoma CDNA library using a method, designated serological fishing, designed to library using a method, designated serological fishing, designed to identify immunoreactive markers of disease. In this method, cells characteristic of a disease are used to prepare a CDNA library for transformation of eukaryotic or prokaryotic cells, and the cells grown to express proteins. Patient serum is incubated with the cells grown to prepare the library, but not transfected, to remove any components reactive with these cells, then the stripped sample is similarly treated with cells carrying the empty vector. The twice-stripped sample is incubated with lysate of the library cells, so that specific components in the sample may bind to the expression protein. Proteins that form in the sample may bind to the expression protein. Proteins that form SEL-40, the new melanoma associated antigen is strongly expressed in melanoma, but not healthy tissues. The deduced amino acid sequence conditions a tumour-associated peptides (see AAW41587-89) that bind to HLA-AZ-1. The serological fishing method was also used to identify a claimed marker (see AAV04262) of Hodgkin's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acid and derived protein are markers for Hodgkin's disease - used in identifying immuno:reactive markers of disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       218
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  278
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          158

The present invention describes a method (M1) for screening for an antineoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in comprises a sequence (S) selected from 847 sequences set, where (I) comprises a sequence (S) selected from 847 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CTAGGTTTCAAGGCCACCCTCCCACCTTTCATGTTATAAACGGGCCGAAGACTTCCAG

The present invention describes a method (M1) for screening for an antinoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in comprises a sequence (S) selected from 847 sequences (given in ABL61664 comprises a sequence (S) selected from 847 sequences (given in ABL61664 comprises a sequence (S) selected from 847 sequences (given in ABL61664 comprises a sequence (S) selected from 847 sequences (given in ABL61664 cortivity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the heat collected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarinoma, carionoma, calcinoma, squamous call carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              159 ATCCAAAAGGCCTTCGATGATATTGCCAAATACTTCTCTAAGGAAGAGAGTGGGAAAAGATG

                                                                                                                                                                                                                                                                                                                                                   ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oilgomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed sequence tags for identifying expressed activity of (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The

polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in flet wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                    1 ATGAACGGAGACGACGTTTTGCAAGGAGACCCAGGGATGATGCTCAAATATCAGAAG

Sequence 5, Application US/09833039A

Patent No. 6673350

GENERAL INFORMATION:
APPLICANT: Threci, Ozlem
APPLICANT: Ffreundschuh, Michael
APPLICANT: Ffreundschuh, Michael
TITLE OF INVENTION: Tumor Associated Peptide and Uses Thereof
TITLE OF INVENTION: UNS-09/833,039A

CURRENT APPLICATION NUMBER: US/09/833,039A

CURRENT APPLICATION NUMBER: US 09/409,455

PRIOR FILING DATE: 1999-06-25
PRIOR FILING DATE: 1999-06-25

PRIOR APPLICATION NUMBER: US 09/344,040

PRIOR APPLICATION NUMBER: US 09/344,040

PRIOR APPLICATION NUMBER: US 09/344,040

PRIOR PILING DATE: 1999-06-26

NUMBER OF SEQ ID NOS: 131
